Hockey Goalie Trials

Quick start guide · Data Driven Development

Hockey Goalie Trials runs fair, evidence-led goalkeeper trials: the same drills for everyone, recorded shot by shot, compared on actual performance, with ratings that can never outweigh the statistics.

1. Create the trial

1. Open **Trial Events** and press **Create New Trial**. Start blank or from a saved Trial Event Template. A multi-day template asks for the date of every day; dates must be filled in, different and in order.
2. In **Trial Setup**, check the team, gender, age group, level and tier, add each trial day, and add the sections for each day (Penalty Corners, Penalty Strokes, 8 Second 1v1, Match Situation) with the attempts each goalkeeper should face.
3. Save a day as a Trial Day Template to reuse its sections. A template is never applied over a day that already has results.

2. Build the roster

1. In **Trials Roster**, use **Choose Shared Goalie** for goalkeepers already enrolled on the platform, or **Add Trial-only Goalie** for someone who is only trialling. Trial-only goalkeepers are not added to the permanent directory.
2. Age is checked at 23:59 on 31 December of the previous year. An ineligible goalkeeper gets a red warning and must be confirmed before being added.
3. Give each goalkeeper a smock and leg-guard colour so recorders can tell them apart.

3. Record

1. In **Trial Recording**, choose the day and section. Penalty Corner, Penalty Stroke and 8 Second 1v1 sections set the shot situation automatically.
2. Choose the goalkeeper in goal, then record each attempt: outcome, shot type, outnumbered and rebound. The first recorded shot starts that goalkeeper's timer.
3. Rate each goalkeeper once per section from 1 to 5 (starting at 3). Ratings save automatically.
4. The rotation overview shows every goalkeeper's shots and time in goal. A section turns green when its attempt target is reached. Use **Undo last** to remove a mistake, or edit a shot from the timeline.

4. Compare and select

Step	What happens
Comparison	Rank goalkeepers by Defence Rate combined with ratings. The Ratings influence slider runs from 0% to 100%; at 100% ratings count equally with Defence Rate, never more. A goalkeeper with no attempts scores 0. Equal scores share a rank (=2). Warnings appear when attempts are unequal on a day.
Promotion / Selection	Press Mark Day Completed, then choose who progresses. Excused from this round needs a reason. On the final day every goalkeeper starts as Outcome pending; choose Selected, Reserve, Non travelling reserve or Not selected for each before confirming. Completed days can be reopened with a six-digit code.

Selection Report	Selected, Reserve and Non travelling reserve come first; everyone else follows, ranked after them. Switch to Individual feedback for one goalkeeper. Use Print / Save PDF.

5. Video Review

Match Situation sections use Goal A and Goal B; other sections use a single goal. Add videos to each playlist, sync them with markers or Auto Sync (offsets up to 60 minutes), and record or edit shots against the video. Long files are read at four times normal speed, so keep the tab open while it works. File access is remembered where the browser allows; video files are not part of a backup.

Back up trials from the platform’s Backup & Restore page (Hockey Goalie Trials only, or the complete suite).
