Indoor Hockey Goalie Stats

Quick start guide · Data Driven Development

Indoor Hockey Goalie Stats records indoor matches for a goalkeeper, shot by shot, and turns them into statistics, heat maps and reports. Indoor matches are stored separately from Field Hockey matches; goalkeepers and teams are shared.

1. Before your first match

1. On the Data Driven Development home screen, open **Enrol Goalie**. Enter the name, date of birth and gender. The age group is worked out at 23:59 on 31 December of the previous year.
2. Add a team profile with **Sport: Indoor Hockey**. Set its Level (School, Club, Provincial, National) and Tier (A / 1st to D / 4th). Level and Tier are needed before matches can be used for benchmarking.
3. Open Indoor Hockey Goalie Stats. The start screen shows the goalkeeper, a **New Match** button and recent matches. If the goalkeeper has no Indoor team yet, it tells you.

2. Record a match

1. Press **New Match**. Check the goalkeeper, date and home team, and type the opponent. Indoor matches default to four periods.
2. Choose the Match Type and the opposition classification. A note above the start button shows whether the match is benchmark-ready and what is missing. You can still record without it.
3. Press **Start / Save Match Details**. The shot recording area unlocks.
4. For each shot choose the outcome (Save, Goal or Angle Closed Off), the situation, the shot type, whether the goalkeeper was outnumbered, and the rebound result.
5. Tap where the shot came from on the D heat map and where it reached the goal on the goal box map, then press **Save Shot With Heat Map**. During fast play, use **Save Shot Without Heat Map** and add placements later in the Heat Map Editor. Angle Closed Off is placed on the D map only.
6. Press **End of Period** at the end of each period.
7. Enter the home team goals and the coaching ratings (Positioning, Communication, Rebound Control, Decision Making), then press **Finish Match**. A drawn match offers a shootout: six-second attempts, three each, then sudden death.

Indoor shot situations: Normal Game Play, Penalty Corner, Penalty Stroke and 6 Second Shoot-out. Outnumbered options include 5 vs 1 and Empty Goal. Empty-goal team events do not count against the goalkeeper.

3. Video Stats Review

Open it from New Match or Match Editor. Add one or more camera angles with their videos, line them up with the sync markers or Suggest Auto Sync, and record shots while you watch. Long videos are read at four times normal speed; keep the tab open until it finishes. Video files stay on your device and are not part of a backup.

4. Look at the results

Page	What it is for
Match Editor	Change match details, edit or add shots, and fix heat-map placements.

Stats	Save Rate (saves ÷ saves + goals), Defence Rate and breakdowns, filtered by team, opponent and period (one match, a year, the last 5 or all).
Heat Maps	Where shots came from and where they reached the goal, coloured by outcome.
Reports	Choose the goalkeeper, Home Team Filter and report type, then Generate Report. Every report uses only matches for the selected team. Print or save it as a PDF.

5. Benchmarking and backups

- Opt in on the platform's **Benchmarking** page. Only anonymous statistics are uploaded, never names. Indoor goalkeepers are compared only with other Indoor goalkeepers, and small groups are labelled Limited Data.
- Make a backup regularly from the platform's **Backup & Restore** page. Merge restore adds anything missing on this device and keeps your newer edits.
- Matches recorded on the Stats Recorder with Sport set to Indoor Hockey are imported from Backup & Restore → Recorder Match Import.
